

Medical Benefits of Kangen Water®

Clinical experience in Japan has shown, according to published findings, that in a number of cases kangen water has brought improvement to patients that did not respond to pharmaceutical treatment, including hypertension, asthma, lipid metabolism abnormalities, kidney disease, digestive disorders, and liver disorder.

In addition, media reports indicated that Professor Shirabatake of Kyushu University has experimentally verified that kangen water inhibits replication of cancer cells.

The Ministry of Health, Labour and Welfare in Japan has recognized the following benefits of kangen water:

- 1) Inhibits abnormal fermentation in the digestive tract
- 2) Eases chronic diarrhea
- 3) Alleviates digestive abnormalities
- 4) Alleviates excess gastric acid

More and more hospitals in Japan are using kangen water as part of the treatment programs, and more and more papers are being published documenting the treatment benefits.

Clinical Uses of Kang en Water in Hospital Treatment

1) Rapid reduction in blood sugar levels in diabetic patients

One of the fundamental treatments for diabetic patients is of course dietary treatment. Sometimes though, dietary treatment alone is not enough. Dietary changes may not lower blood sugar levels as much as expected. Hospitals have observed that about 80% of diabetic patients who started intake of kangen water showed lower levels of blood sugar within two weeks of

treatment. This made it possible to reduce the amount of diabetic treatment medication administered.

2) Rapid healing of gangrene (of the lower limbs) due to diabetes

At least two diabetic patients with lower limb gangrene had not shown any signs of improvement after months of pharmaceutical treatments. After one month of drinking kangen water, observation was made and reported complete recovery of gangrene for these two patients.

3) Rapid normalization of high uric acid levels in respiratory patients

One Japanese hospital observed a decline in and normalization of uric acid levels anywhere from two to four weeks after starting intake of kangen water.

4) Rapid improvement in patients with hepatitis and cirrhosis in the liver

Kangen water intake is believed to be effective in treating both acute and chronic hepatitis and in treating cirrhosis in the liver.

A representative case for a hospital was a 60 years old male patient. Improvement was noted in his hepatocirrhosis one month after starting intake of kangen water. Thereafter, all treatments with medication, IVs' and diet were discontinued. And after six months of kangen water intake as the sole treatment, liver function has completely returned to normal.

5) Rapid healing of stomach and duodenal ulcers

It is no exaggeration to say that intake of kangen water produced dramatic improvement in patients with stomach and duodenal ulcer. One particular striking case is described below.

A 40 years old patient had endured repeated attacks of duodenal ulcers over a period of 12 years. One night, the patient was rushed to the hospital by ambulance after vomiting blood profusely. The patient was immediately admitted and a blood transfusion of 1000cc was administered along with supplemental fluids. Once stabilized, the patient was permitted to drink 1 to 2 liters of kangen water each day.

Within a week after admission, improvement was noted. An inspection with gastric camera showed no remaining ulceration, only indications of healing. The result surprised the hospital director, who personally attended the testing with the patient. What is especially noteworthy is the great number of cases in which there has been no recurrence of ulceration as long as kangen water intake was maintained. This is definitely a finding that merits attention.

6) Rapid improvement in high and low blood pressure levels

It is not unusual for patients who have had high blood pressure for many years, to find their blood pressure returning to normal within anywhere from a week to a month when they drink kangen water. Here it is necessary to cite the personal experience of one hospital director. "For several years, I suffered from high blood

pressure, obesity, and high cholesterol. It was especially bad considering that I'm a doctor myself. But after I started taking kangen water, these conditions improved remarkably quickly. Today my blood pressure is 120-70, my blood and liver function test values are all within normal ranges."

"I also met a woman in her 20s who had low blood pressure and always felt cold. Even in the middle of the summer, she had to sleep under thick blankets. Within a week after drinking kangen water, the feeling of chill disappeared and her blood pressure returned to normal."

7) Improvements in asthma, skin rashes, atopic dermatitis, and nasal allergies.

One female patient suffered from atopic dermatitis shortly after birth until age 26. She had tried fasting, brown rice vegetarian diet, germanium, and a variety of other treatments, all to no avail. Her dermatologist even refused to see her to give her anymore treatments. But just a month after she began drinking kangen water, her condition was improved by about 80%. The same hospital has seen a number of other cases of improvement in childhood asthma, skin rashes and pollen allergies after patients started drinking kangen water.

8) Improvement in nervous diarrhea

One 16 year old male high school student had suffered from chronic diarrhea for years, with no relief from any pharmaceutical treatment. He needed to go to washroom so often that he could not even ride the commuter train to school. However, his condition improved dramatically just two weeks after he started drinking kangen water.

9) Improvement in post-surgical chronic diarrhea

A 40 year-old male patient had suffered from frequent diarrhea for seven years after emergency surgery to remove his ulcerated duodenum. His condition had no response to any medication. Two weeks after drinking kangen water, his fecal composition and his frequency of defecation returned to normal.

10) Improve Kidney function

Dramatic improvements have been observed in cases of chronic nephritis and impaired kidney function after patients start intake of alkaline water.

11) Dramatic reduction in incidence of newborn infant jaundice

The obstetrics department in one hospital began using kangen water to mix powdered infant formula for newborn infants starting in May of 1985. Since that time, there have been virtually no cases of abnormal serum bilirubin in newborns. In other words, the incidence of newborn infant jaundice has gone down

dramatically. With this result, obstetricians should promptly look into using kangen water with their patients.

12) Rapid improvement in toxicity during pregnancy

A patient who had to be hospitalized for toxicity during her sixth month of pregnancy recovered completely in about a week after drinking kangen water, and carried her pregnancy to full term.

13) Menstrual difficulties

A young woman patient suffered from menstrual difficulties throughout her teens and into her early 20s. She went to a number of doctors hoping she could find even a slight relief, but all of them told her it was a matter of physical constitution, even in adulthood, and there was nothing they could do. However, the hospital director was aware of kangen water and had confirmed its benefits, so he encouraged the patient to drink kangen water. Just two months after drinking kangen water, the patient's menstrual cycle became regular, and her menstrual cramps had greatly improved. There have been a number of other similar cases at this hospital since that time. Recently there are more reports of women with cramps and other menstrual difficulties in their teens and 20s. Perhaps this is a result of chronic tension from our high-stress society, or changes in our dietary patterns.

Also there are more reports of women experiencing problems at the time of menopause as well.

It is a fact that micro-organisms in the digestive tract also secrete female hormones. A number of people believe women with these problems should be encouraged to drink kangen water based on the fact above.
